

WorldExtend IronDoor® 3.5

WorldExtend IronDoor® 3.5 delivers Citrix-like features to you affordably without the need for expensive dedicated hardware, complicated setup, additional training or staff. WorldExtend enables small to medium businesses to easily deliver applications and access them with assigned logins anytime, anywhere and securely through a web-based application launchpad.

With WorldExtend IronDoor 3.5 you can easily access applications, data, desktops, servers routers and FTP servers, all of which can reside at multiple locations which can be accessed through a single application launchpad. Using our patent pending Ø-Port and Ø-Listener technologies, your data and network infrastructure is secure from unwanted attacks. Users given proper access rights can stay productive without sacrificing network security.

Application Publishing

Using WorldExtend IronDoor® 3.5, you can securely and easily publish your mission-critical Windows applications – from CRM software to business productivity suites to corporate databases and access them remotely through a easy-to-use web-based application launchpad.

Remote Desktop & VNC

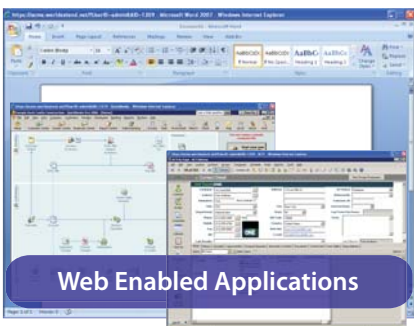

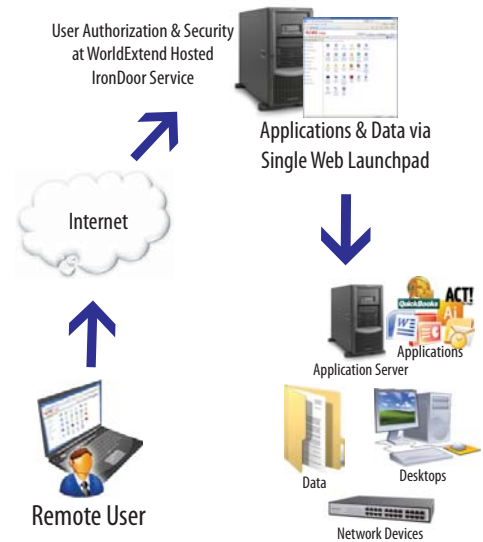

Remote users can also be authorized to access their office desktops, other desktops or servers through the WorldExtend IronDoor application launchpad. This option may be particularly useful for helpdesk personnel or network and IT administrators who require robust remote access to functions on another computer or server.

TELNET & FTP

WorldExtend IronDoor® 3.5 enables network and IT administrators to remotely access TELNET devices such as routers and make changes without having to remove the device from service. In addition users can access FTP servers using our Ø-Port technology (and SSH encryption) keeping your passwords and data secure during transmission.
